CONFIDENTIAL PRELIMINARY REPORT

TEAM MEMBERS:

Renee C. Wachtel, M.D.

Joan Wenters, Ph.D.

Diagnoses:

1. Autistic Disorder
2. Developmental delay. Bayley II MDI less than 50, age equivalent 14 months. Vineland adaptive composite 69. Communication skills 15 months, daily living skills 17 months, socialization skills 12 months, motor skills 17 months.

Recommendations:

1. Suggest intensive autism treatment program including discrete trial (ABA), speech language therapy with augmentative communication, developmental therapy and occupational therapy. Strongly suggest a home component with parent training.
2. Suggest referral to North Bay Regional Center for early intervention services including case management
3. Suggest audiologic evaluation
4. Suggest genetics evaluation to determine potential etiology including high resolution karyotype and Fragile X
5. Parent support and education, including family resource network and www.autism-society.org
6. Suggest at least yearly developmental monitoring
